Brad/Jacques,

the attached is far from complete or what I wanted to get to you, but it is all I have time for this week. The gist is tell the fill and borrow alternatives analysis story for Phase 0 and Phase 1. I'm thinking copy from the attached and insert in the design report OR we can complete the attached and include it in the appendix for the design report. Whichever is easiest. For Phase 1 Jacques, see the attached word file that went along with the slide deck for our 1st mtg with the landowners. The word file can be borrowed from for us to elaborate on in the report or appendix.

Jacques, you had a reasonable start in the draft report you provided last fall. The goal here is to expand to capture the story of the extensive alt analysis (even if we didn't have defined screening criteria/ranking for plan formulation) for step wise due diligence.

Sorry for the extended delay in being able to provide this information and not providing the help or quality I'd hoped to. Happy to discuss Wednesday. I'll be in the bldg tomorrow from 9 - 10 and can try to touch base before or after.

All,

As some of you are aware, a property owner has recently expressed some concern about the Island Road project. Both Pat and I have spoken with this person and agreed to meet face-to-face to lay out the project and offer them a better understanding of our approach and thought process in designing the project. To that end, I recently met with Pat Williams and we reviewed a set of figures we believe lay out the steps we took to arrive at the current fill cell and borrow area footprint.

I'd like to meet with the relevant stakeholders (Apache, Conoco, and Ducks Unlimited) in mid-February. Before we meet face-to-face with these stakeholders I'd like the team to meet to review the figures and the talking points (both attached) to help further refine these or identify any gaps that may need to be filled. I will look to schedule this meeting for the first week of February and will send out an invite shortly. In the meantime, please review the figures and talking points and feel free to make additions or clarifications.

If you have any questions please don't hesitate to contact me.

Best, Jason
