Northwest Turtle Bay
Marsh Creation (BA-125)

Project Status
Approved Date: 2012  Project Area: 798 acres
Approved Funds: $33.6 M  Total Est. Cost: $33.6 M
Net Benefit After 20 Years: 432 acres
Status: Construction
Project Type: Marsh Creation
PPL #: 21

Location
This project is located in Region 2, Barataria Basin, Jefferson Parish, northwest of Turtle Bay.

Problems
Historic wetland loss in the area stems from shoreline erosion along Turtle Bay and interior marsh loss from subsidence, sediment deprivation, and construction of oil and gas canals. Based on the hyper-temporal analysis conducted by USGS for the extended project boundary, loss rates in the area are estimated to be -0.83% per year for the period 1984 to 2015.

Restoration Strategy
The primary goal is to re-create marsh habitat in the open water areas and nourish existing marsh within the project area. The specific goal of the project is to create approximately 700 acres of marsh with dredged material from Turtle Bay or Little Lake. The total project area is 798 acres, but the entire area will not be filled with dredged material.

The proposed project would create approximately 484 acres and nourish approximately 216 acres. Existing canal spoil banks, emergent marsh, and limited segments of containment dikes will be used to guide the distribution of the dredged material in the western fill area. Complete perimeter containment dikes will be utilized for the eastern fill area. Containment dikes will be gapped to reestablish hydrologic connectivity with adjacent wetlands.

The project will work synergistically with several existing and planned projects on the Barataria Basin Landbridge, an important landscape feature across the central Barataria Basin.

Progress to Date
This project is on Priority Project List 21.
