Barataria Bay Waterway West Side Shoreline Protection (BA-23)

Project Status
Approved Date: 1994    Project Area: 1,789 acres
Approved Funds: $3.36 M    Total Est. Cost: $3.36 M
Net Benefit After 20 Years: 232 acres
Status: Completed November 2000
Project Type: Shoreline Protection
PPL #: 4

Location
The project is located in Jefferson Parish, Louisiana, on the
west bank of the Dupre Cut portion of the Barataria Bay
Waterway, north of the Lafitte Gas and Oil Field and south
of the subsided land reclamation effort known as “the Pen.”
The project encompasses 1,789 acres of brackish marsh and
open-water habitat on the west bank of the Barataria Bay
Waterway.

Problems
The banks of the Dupre Cut have eroded considerably as a
result of vessel wakes. Large breaches in the banks have
exposed the adjacent marsh to increased water exchange and
rapid changes in salinity.

Restoration Strategy
9,400 linear feet of foreshore rock dike were constructed on
the west bank of Dupre Cut to reduce excessive water
exchange in the adjacent marshes. A water control structure
was also installed to limit saltwater intrusion into the marsh
area and to aid in the maintenance of favorable water levels
for wintering waterfowl.

Progress to Date
This project was coordinated with the U.S. Army Corps of
Engineers maintenance-dredging program to provide
beneficial use of dredged material by placing it behind the
armored levee in order to create new marsh. Construction
was completed in November 2000. The O&M Plan was
signed in July 2002. This project is on Priority Project List
4.

In order to prevent the heavy rock riprap from settling too deep in the organic
soil, geo-textile cloth was first put down and used as a base.

Where existing structures were encountered, such as the crossing of the freshwater
delivery system to Grand Isle pictured above, the alignment of the structure was
altered.
