Project Status
Approved Date: 1997       Project Area: 2,790 acres
Approved Funds: $5.22 M   Total Est. Cost: $5.22 M
Net Benefit After 20 Years: 217 acres
Status: Completed June 2001
Project Type: Shoreline Protection
PPL #: 6

Location
The project is located in Jefferson Parish, Louisiana, on the east bank of the Dupre Cut portion of the Barataria Bay Waterway, north of the Lafitte Gas and Oil Field and south of the subsided land reclamation effort known as “the Pen.”

Problems
The banks of the Dupre Cut have eroded considerably as a result of vessel wakes. Large breaches in the banks exposed the adjacent marsh to increased water exchange, tidal energy, and saltwater intrusion.

Restoration Strategy
The objective of this project was to rebuild and stabilize the east bank of the Dupre Cut. A stronger bank would reduce erosion and help reestablish wetlands by allowing sediment accretion on the leeward side of the foreshore rock dike.

The project plan involved the construction of over 3 miles of foreshore rock dike along the east bank of the Dupre Cut to protect adjacent marshes from shoreline erosion. This rock dike extends above the surface of the water and will protect the fragile marsh area from boat wakes generated within the BBWW.

Progress to Date
Construction was completed in June 2001. Baseline monitoring information has been collected and will be used to evaluate the project’s effectiveness. The O&M Plan was signed in October 2002. This project is on Priority Project List 6.
