**Project Status**

**Approved Date:** 2000  
**Project Area:** 1,825 acres  
**Approved Funds:** $2.3M  
**Total Est. Cost:** $18.2M  
**Net Benefit After 20 Years:** 472 acres  
**Status:** Transferred  
**Project Type:** Barrier Island Restoration

**Location**

This project is located at the mouth of Barataria Bay in Jefferson Parish, Louisiana. The islands are bordered by Barataria Bay to the north, Barataria Pass and Grand Isle to the west, Quatre Bayou Pass to the east, and the Gulf of Mexico to the south.

**Problems**

Over time, the high frequency of tropical storms, high bay and gulf shoreline erosion rates, the subsidence of back barrier marshes, and a lack of sand in an already sediment-deprived system have caused the breakup of Grand Terre into two islands. In addition, these processes have resulted in the loss of natural terrestrial and aquatic barrier island habitats.

**Restoration Strategy**

The barrier shoreline of western Grand Terre Island will be restored by constructing 40 acres of dune from the Lyle S. St. Amant Marine Biological Laboratory to the U.S. Army Corps of Engineers’ disposal area. Dune platforms will be planted with marshhay cordgrass (Spartina patens) and bitter panicum (Panicum amarum) and the marsh platform will be planted with smooth cordgrass (Spartina alterniflora).

**Progress to Date**

Surveying, sand search, and preliminary design are in progress. This project is currently de-authorized.

This project is listed on Priority Project List 9.
