Project Status
Approved Date: 2007  Project Area: 352 acres
Approved Funds: $0.58 M  Total Est. Cost: $0.58 M
Net Benefit After 20 Years: 203 acres
Status: Engineering and Design
Project Type: Marsh Creation
PPL #: 17

Location
The project area is located in Plaquemines Parish in the Barataria Basin. The site is located near Hwy 23 at West Pointe a la Hache.

Problems
As a result of leveeing the Mississippi River for navigation and flood control, the West Pointe a la Hache wetlands were cut off from the historic overbank flooding of the river. Without continued sediment input, marshes couldn’t maintain viable elevations due to ongoing subsidence. In addition, oil and gas canals disrupted hydrology and facilitated saltwater intrusion further degrading the marsh. Beginning in 1993, the siphons at West Pointe a la Hache were operated to re-introduce Mississippi River water, fine sediments, and nutrients into this area. However, land loss rates have continued to be high. An opportunity exists to create marshes directly in the influence area of the siphons using sediment from the nearby Mississippi River. The created marshes should benefit from the effects of the re-introduced Mississippi River water from the siphons.

Restoration Strategy
This project will recreate marsh habitat in the area just west of the Jefferson Lake Canal by harvesting sediment from the Mississippi River and pumping it via pipeline to the proposed site. The goals of this project include converting approximately 250 acres of open water habitat to intermediate marsh, nourishing approximately 102 acres of existing intermediate marsh with dredged material, and maintaining 203 acres of created/nourished marsh over the 20-year project life.

Progress to Date
Project is currently in the Planning and Design Phase. A 30% review meeting is anticipated for June 2010. Project is scheduled to request Phase II funding at the January 2011 Task Force meeting. Construction is anticipated to begin September 2011 with a completion date of September 2012.

This project is on Priority Project List 17.

Open water area being restored to emergent marsh.
