Project Status
Approved Date: 2016       Project Area: 413 acres
Approved Funds: $3.60 M  Total Est. Cost: $38.0 M
Net Benefit After 20 Years: 250 acres
Status: Engineering and Design
Project Type: Marsh Creation
PPL #: 25

Location
The project is located immediately south of Calcasieu Lake and west of the Calcasieu Ship Channel in Regional Planning Unit No. 4, Calcasieu-Sabine Basin, Cameron Parish, Louisiana.

Problems
Altered hydrology, drought stress, and saltwater intrusion have caused the area to undergo interior marsh breakup. Impacts from Hurricane Rita in 2005, Hurricane Ike in 2008, and recently Hurricane Laura in 2020 have resulted in the coalescence of Oyster Lake with interior water bodies increasing wave/wake related erosion. Based on USGS hyper-temporal data analysis (1984 to 2019), land loss rate for the area is -0.52% per year. The subsidence rate is estimated at 4.3 mm per year or 0.28 feet per 20 year project life.

Restoration Strategy
The specific goals of the project are: 1) Create 255 acres of saline marsh; 2) Nourish 158 acres of existing saline marsh, and (3) Maximize the amount of time the created marsh platform is intertidal throughout the 20 year design life of the project.

This project will construct approximately 383 ac of marsh with confined disposal marsh creation and 30 ac with unconfined disposal marsh creation. Four marsh creation areas will have temporary containment dikes constructed to contain the fill, and one marsh creation area will be unconfined. In order to achieve these goals, sediment would be hydraulically dredged from an offshore disposal area to create approximately 413 acres of saline marsh. Disposal areas would be constructed next to the Oyster Bayou Restoration Project (CS-59) marsh creation areas and terrace field depicted on the concept map (yellow polygon).
