Rockefeller Refuge Gulf Shoreline Stabilization (ME-18)

Project Status

Approved Date: 2001  Project Area: 450 acres
Approved Funds: $33.3 M  Total Est. Cost: $34.3 M
Net Benefit After 20 Years: 256 acres
Status: Construction
Project Type: Shoreline Protection
PPL #: 10

Location

The project is located along the Rockefeller Wildlife Refuge Gulf of Mexico shoreline from Joseph’s Harbor canal, westward 3 miles in Cameron Parish, Louisiana.

Problems

The project is designed to address Rockefeller Wildlife Refuge gulf shoreline retreat that averages approximately 46 feet/year with a subsequent direct loss of emergent saline marsh.

Restoration Strategy

The project is constructing shoreline protection along the Gulf of Mexico off Rockefeller Wildlife Refuge. A lightweight aggregate core rock breakwater is being constructed westward from Joseph Harbor along the gulf shoreline for approximately 3 miles. The breakwater consists of encapsulated lightweight aggregate, bedding stone, and large armor stone and has a 65- to 70-foot bottom width and a 18-foot crown width. The project is designed to reduce shoreline retreat along a stretch of gulf shoreline, promote shallowing and natural vegetative colonization of the overwash material landward of the structure. Gaps in the breakwater will facilitate movement of organisms and allow sediment-laden water behind the breakwater.

Progress to Date

Engineering and design are complete. Construction on this project began in July 2018.

This project is listed on Priority Project List 10.
