

North Catfish Lake Marsh Creation (TE-112)

Cost figures as of: July 2025

Project Status

Approved Date: 2013 **Project Area:** 733 acres
Approved Funds: \$3 M **Total Est. Cost:** \$30 M
Net Benefit After 20 Years: 489 acres
Status: Engineering and Design
Project Type: Marsh Creation
PPL #: 22

Location

Region 3, Terrebonne Basin, Lafourche Parish, Northern Shoreline of Catfish Lake.

Problems

Isolated from the riverine influences of the Mississippi and Atchafalaya Rivers, Eastern Terrebonne Basin has experienced some of the highest rates of land loss in Louisiana. The northern shoreline of the Catfish Lake has experienced an average erosion rate of approximately 9.8 feet per year and interior marsh loss rate of -1.11% per year. Interior loss of marsh along the lake rim has resulted in the formation of large open water areas on the east and west side of the lake shoreline that have breached and greatly accelerate wetland loss in the area.

Restoration Strategy

The goal of the project is to create marsh habitat and reestablish the northern shoreline of Catfish Lake. Sediment dredged from Catfish Lake will be used to strategically create marsh along the northern shoreline. Smooth cordgrass will be planted along the lake shore-face to help stabilize the shoreline and reestablish a healthy lake rim marsh community. Sediments will be hydraulically dredged from Catfish Lake and pumped via pipeline to create approximately 525 acres of marsh habitat and nourish an additional 208 acres of marsh habitat.

Aerial view from the southeast looking towards the northeast section of Catfish Lake. The project will hydraulically dredge material from the lake to restore the fragmented marsh along the lake rim.

Progress to Date

This project is on Priority Project List 22.
