Appendix D  Field Inspection Form
I. Introduction

The Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) project area is located between Pass Chaland and Grand Bayou Pass and separates Bay Joe Wise from the Gulf of Mexico. It is located in Plaquemines Parish.

II. Project Description and History

The Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration Project (BA-35) consists of nourishing and rebuilding the shoreline with sediment to create a beach berm, dune, and a back barrier marsh platform. The wetlands, dune, and swale habitats within the project area have undergone substantial loss due to oil and gas activities, subsidence, sea-level rise, and marine and wind induced shoreline erosion. Marine processes acting on the abandoned deltaic headlands and barrier islands rework and redistribute the previously deposited sediment. In these areas along the shoreline, there are several locations where the shoreline has receded and decreased to a critical width that is susceptible to breaching during storms.

Construction of the Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) was completed in July 2009.

III. Inspection Purpose and Procedures

The purpose of the annual inspection of the Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) is to evaluate the constructed project features to identify any deficiencies and prepare a report detailing the condition of project features and recommended corrective actions needed. Should it be determined that corrective actions are needed, the OCPR shall provide, in the report, a detailed cost estimate for engineering, design, supervision, inspection, and construction contingencies, and an assessment of the urgency of such repairs (O&M Plan). The annual inspection report also contains a summary of maintenance projects and an estimated projected budget for the upcoming three (3) years for operation, maintenance and rehabilitation. The three (3) year projected operation and maintenance budget is shown in Appendix C. A summary of past operation and maintenance projects completed since initial construction of the project can be found in Section II.

An aerial inspection of the Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration Project (BA-35) was held on May 13, 2011, by members of Coastal Engineering Consultants, Inc. Both NOAA and CPRA agreed to use the photos from this inspection to write this report. Photographs of this inspection are included in Appendix B of this report.
IV. Inspection Results

Sand Fence

Approximately 14,360 linear feet of sand fencing was installed during project construction. This structure appears to be holding up based on the photographic evidence (Photo #2).

Containment Dike

The containment dike was not degraded upon demobilization from the construction site. During the period between demobilization and this inspection the dike has been slowly degrading due to natural processes. At least three gaps are visible in the photos from this inspection (Photos #3 and 4). We note that vegetation is present near these breaches, and water can be seen interior of the dikes near some of the breaches. It appears that limited hydrologic exchange is occurring between the marsh creation area and surrounding waters.

Settlement Plates

The settlement plates were not visible from the air but are scheduled to be surveyed 2012.

Vegetative Plantings

The rows of beach and dune vegetation are visible in the photos; however, it is unclear the status of the plants. It is unknown the effect this year’s drought had on the vegetation and whether it has survived through the summer (Photos #2, 3, and 4).

V. Conclusions

Based on the aerial inspection performed this year, this project is performing well. The vegetation is a concern based on these photographs. It will continue to be observed for the next inspection, as well as the need to gap the containment dike. The monitoring survey to be performed later this year should give us some insight into the elevation of the marsh platform and the need to create more exchange with Bay Joe Wise.

VI. Recommendations

It is recommended not to perform any maintenance work at this time.

Immediate Repairs

• None at this time.

Programmed Maintenance
Annual Inspection Report
Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration
State Project No. BA-35

• No Programmed Maintenance is recommended at this time.
Appendix B

Photographs
Photo #1 – Project Area.

Photo #2 – Sand Fence and Vegetative Plantings.
Photo #3 – Western Dike Breach (arrow) and Degradation and Vegetative Plantings.
Photo #4 – Eastern Dike Breaches (arrows) and Vegetative Plantings.
