I. Introduction

The Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) project area is located between Pass Chaland and Grand Bayou Pass and seperates Bay Joe Wise from the Gulf of Mexico. Both project areas are located in Plaquemines Parish.

II. Project Description and History

The Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) consists of nourishing and rebuilding the shoreline with sediment to create a beach berm, dune, and a back barrier marsh platform. The wetlands, dune, and swale habitats within the project area have undergone substantial loss due to oil and gas activities, subsidence, sea-level rise, and marine and wind induced shoreline erosion. Marine processes acting on the abandoned deltaic headlands and barrier islands rework and redistribute the previously deposited sediment. In these areas along the shoreline, there are several locations where the shoreline has receded and decreased to a critical width that is susceptible to breaching during storms.

Construction of the Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) was completed in July, 2009.

III. Inspection Purpose and Procedures

The purpose of the annual inspection of the Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) is to evaluate the constructed project features to identify any deficiencies and prepare a report detailing the condition of project features and recommended corrective actions needed. Should it be determined that corrective actions are needed, the OCPR shall provide, in the report, a detailed cost estimate for engineering, design, supervision, inspection, and construction contingencies, and an assessment of the urgency of such repairs (O&M Plan). The annual inspection report also contains a summary of maintenance projects and an estimated projected budget for the upcoming three (3) years for operation, maintenance and rehabilitation. The three (3) year projected operation and maintenance budget is shown in Appendix C. A summary of past operation and maintenance projects completed since completion of the project can be found in Section II.

An inspection of the Pass Chaland to Grand Bayou Pass Barrier Shoreline Restoration (BA-35) was held on May 28, 2015, by members of NOAA and CPRA. Photographs of this inspection are included in Appendix B of this report.

IV. Inspection Results

Sand Fence

Approximately 14,360 linear feet of sand fencing was installed during project construction. This structure is performing as designed based on visual inspection.

Containment Dike

Due to poor access this feature was not inspected at this time. However, based on recent aerial photography it appears this structure has almost completely degraded.

Settlement Plates

The settlement plates were not inspected on this site visit.

Vegetative Plantings

The vegetative plantings are performing well. The natural vegetation has also filled in the gaps nicely.

V. Conclusions

The project is performing as designed. Based on visual inspections and aerial imagery the shoreline is retreating. The majority of this was caused by the landfall of Hurricane Isaac in 2012. The sand fencing and vegetation is still evident on the island and still performing the job of sediment retainage. This shoreline retreat will continue to be observed visually and through regular surveys. If necessary more sand fencing or vegetative plantings will be used to maximize sediment retainage through the 20 year life of the project.

VI. Recommendations

It is recommended not to perform any maintenance work at this time.

Immediate Repairs

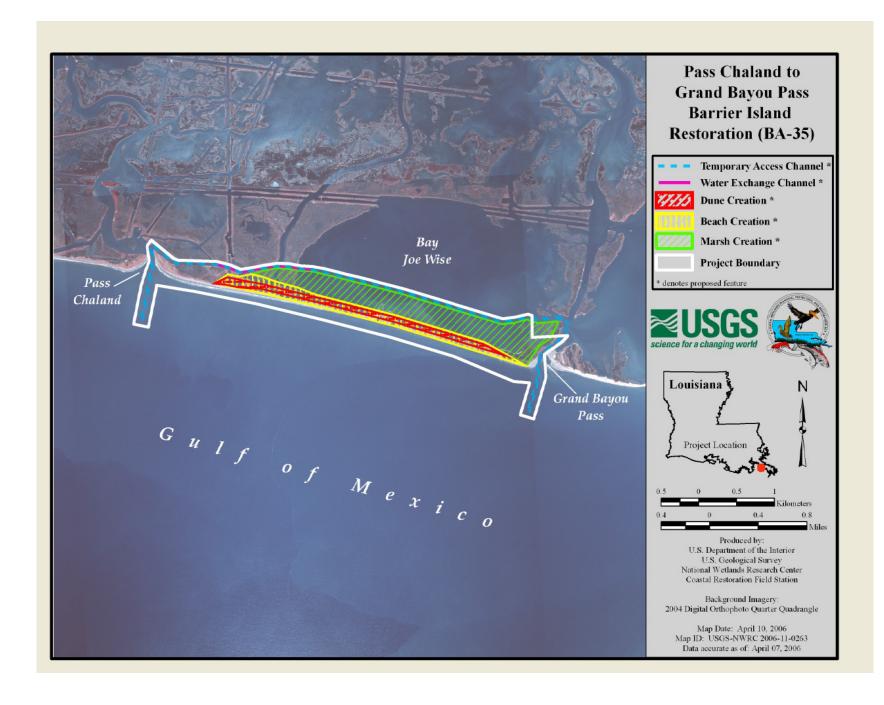

• None at this time.

Programmed Maintenance

• No Programmed Maintenance is recommended at this time.
