2000 Lakeshore Dr., New Orleans, Louisiana 70148

Introduction

The Louisiana Department of Natural Resources Office of Coastal Restoration and Management (LDNR) has implemented a Barrier Island Comprehensive Monitoring (BICM) Data Collection Program with science support from the Pontchartrain Institute for Environmental Sciences (PIES) at the University of New Orleans (UNO). UNO collected and analyzed data to facilitate the LDNR/Coastal Restoration Division (CRD) activities of barrier shoreline planning, design, maintenance, monitoring, and storm impact assessment. The baseline data collection effort and data delivery necessary to establish and develop the LDNR BICM program will provide invaluable information for future efforts involving restoration along Louisiana's sandy shorelines. The effects of the 2005 Hurricane season in Louisiana and subsequent development of integrated hurricane protection and coastal restoration planning programs make this an appropriate time to collect the baseline data necessary for understanding the past and planning for the future.

The Barrier Shoreline Post Storm Assessment consists of 5 Parts:

Part 1: 2005 Post Hurricanes Katrina and Rita Photography

Part 2: 2006/2007 Aerial Survey Photography

Part 3: 2005 – 2006/2007 Photo-Pairs

Part 4: Historic Photo-Pairs/Time Series

Part 5: 2006/2007 Aerial Video Survey

The Aerial Video Survey slide archive includes imagery from 1984 to 2007. Most images were taken from a helicopter during simultaneous video imagery capture as part of the Aerial Video Survey of Coastal Louisiana. Over many years of filming the coast, a standardized methodology produces imagery that can usually be closely compared. Images from any two flights can be paired to produce photo-pairs for illustration of landscape changes for the selected time-periods. Imagery selected from more than two surveys are considered a "Time-series" and are presented in Part 4.

For this report, the last two coastal surveys, Aerial Photo Survey of the 2005 Post-hurricanes Katrina and Rita Impact Zone and the 2006-2007 Aerial Video Survey of Coastal Louisiana, have been paired to provide recent coastal landscape changes as part of the BICM Barrier Shoreline Post Storm Assessment effort.

Funding for the acquisition of 2005 post-hurricanes Katrina and Rita photography was provided by the U.S. Geological Survey Coastal & Marine Geology Program in St. Petersburg, FL. Funding for the acquisition of 2006/2007 photography was provided by LCA Science & Technology Program, a partnership between the LDNR and the US Army Corps of Engineers (USACE), through LDNR Interagency Agreement No. 2512-06-06.

Part 3 includes:

1. Report
 - a. Location diagrams for all photo-pairs divided by region with the OSRADP satellite imagery as a background.
 - b. Water level data for both times of photo-acquisition.
 - c. Tables of location information for each photo-pair by date and segment
2. A CD including:
 - a. Report file in Word 2007 and pdf.
 - b. Excel file of the metadata tables
 - c. Jpeg of each Photo-pair grouped by region and listed by the 2006-2007 image number
 - d. Powerpoint slideshow for each photo-pair
 - e. Pdf slideshow for each photo-pair

Project Location

The LDNR BICM Program encompasses the mainland shoreline of the south Louisiana coast with special emphasis on the sandy beaches and barrier islands. Louisiana's mainland shoreline stretches 450 miles east from Sabine Pass on the Texas/Louisiana Border to the Pearl River on the Mississippi/Louisiana. Between Texas and Mississippi, Louisiana encompasses four distinct geologic regions: 1) Chenier Plain, 2) Acadiana Bays, 3) Mississippi River Delta Plain, and 4) the Pontchartrain Basin (Figure 1).

Figure 1. Louisiana's Geologic Shoreline Regions.

BICM further divided the coastline into eight regions: Western Chenier Plain, Eastern Chenier Plain, Acadiana Bays, Teche Delta, Lafourche Delta, Modern Delta, Chandeleur Islands, and the Lakes Region (Figure 2).

Figure 2. BICM divides coastal Louisiana into eight regions.

Methodology - Acquisition

The 2005 Post Hurricanes Katrina and Rita photography was acquired as a photo-survey and not part of a video survey. For quick response, the imagery was acquired from a small plane and was flown in the reverse direction of a standard video survey to maintain the standard

camera angle when shooting past the wing supports of the plane. An attempt was made to reproduce the same compositions as a standard video flight, but the plane could not execute the same maneuvers as a helicopter for control of each shot. The unavoidable result was that many areas, such as the island ends, could not be photographed in comparable compositions.

In the documentation, the 2005 images are listed in reverse order to be consistent with the order of historical files. The dates and areas of acquisition were:

September 28, 2005 - Point au Fer Island (9:05:33 CDT) to Sabine Pass (10:52:40 CDT), and

September 30, 2005 – Chandeleur Islands (9:42:04 CDT) to the Isle Dernieres (11:25:25 CDT).

The 2005 photos were taken by a Canon PowerShot A75 digital camera. Jpgs created by this camera have a file size just under 1 MB with dimensions averaging 2048x1536 pixels at 180 pixels/inch which corresponds roughly to 350dpi at a 4x6 inch size. Since no GPS data was collected during this flight, the locations and camera angle of each photo frame was established by visually matching the scene with the 2006/2007 Aerial Video Survey (AVS) imagery, manually creating a geo-referenced marker for each frame based on the 2006/2007 flight line data in MediaMapper, and transferring the location data for each frame to an excel file. The camera was aimed roughly perpendicular to the shoreline, so the camera angle was interpreted as 90 degrees counter-clockwise from the 2006/2007 trackline. In some cases, the camera angle had to be estimated based on angle of features in the image. Some of the images could not be accurately located by this method were estimated between the frames on either side, or by the “best-guess” method. The OSRADP 2001 satellite composite of Louisiana was used as a background for the figures.

The 2006/2007 oblique photography was taken from a helicopter during simultaneous video imagery capture as part of the 2006/2007 Aerial Video Survey of Coastal Louisiana. Along the Gulf shoreline, the helicopter traveled from west to east from Sabine Pass to the Mississippi River Delta, and then south to north along the Chandeleur Islands. The bays were recorded by keeping the undulating shoreline on the left side of the helicopter. The altitude was usually 200-300 ft other than at the end of islands, where the altitude was increased to 700 feet or more for a longshore view. Photos were taken by a Canon PowerShot S3 IS digital camera. Jpgs created by the camera have a file size at 1MB with dimensions averaging 2272x1704 pixels at 180 pixels/inch which corresponds roughly to 380dpi at 4x6 inch size.

The dates and areas of acquisition that corresponded to 2005 coverage were:

November 20, 2006 –

Western Chenier Plain – Sabine Pass (11:49:49 CST) to Mud Lake Outlet (12:45:32 CST)

Eastern Chenier Plain – Mud Lake Outlet (14:49:37 CST) to Southwest Pass (16:11:11 CST)

April 20, 2007 –

Teche Delta -Raccoon Island of the Isles Dernieres (9:18:05 CDT) to Wine Island (10:02:46 CST)
 Lafourche Delta – Timbalier Island (10:06:40 CDT) to East Grand Terre Island (12:03:31 CDT)
 Modern Delta – Cheniere Ronquille (12:06:59 CDT) to Sandy Point (12:43:19 CDT)
April 21, 2007 –
 Chandeleur Islands (10:15:53 – 11:18:23 CDT)

Methodology - Processing

Images from each survey had to be manually searched for possible matches and were entered into an excel spreadsheet with pertinent location data. “Good” matches were highlighted in red for further processing. The spreadsheet is included at the end of this section.

Each photo-pair was processed in Adobe PhotoShop. The images were overlaid on a grid to match scales and crop as necessary to match compositions. At times it was necessary to digitally “stretch” an image to enhance the visual relationship because of the perspective produced by a difference in altitude or camera angle. The photos were then arranged together on one figure. Occasionally a red triangle was used to help identify the same feature or location on each image to enhance the visual comparison. The date of each image was added, and a text line was added at the bottom to provide location information – at a minimum: latitude, longitude and camera angle. Once images are matched, scaled, adjusted and cropped, the images were individually “flattened” and saved as individual jpegs. These individual jpegs were then assembled into a Powerpoint slideshow for each BICM region, to make it easier to scroll through and view. The finished PowerPoint is then saved as a pdf file for web-serving.

Locations are generally based on the GPS from the 2006/2007 Aerial Video Survey. Locations of each photo-pair were then located through the Media Mapper software and indicated on the location diagram by a red triangle.

Water level

Table 1 lists the mean range, spring range, and mean tide level for various stations along the Louisiana coastline. The table is modified from the NOAA website:

<http://tidesandcurrents.noaa.gov/tides07/tab2ec4.html#108>

Table 1. Mean range, spring range and mean tide levels in feet for tide gages along the Louisiana coast. Many of the listed stations are no longer active.

Station	Latitude	Longitude	Mean Range (ft)	Spring Range (ft)	Mean Tide Level (ft)
Chandeleur Light	30° 03'	88° 52'	- -	1.2	0.6
Comfort Island	29° 49.4'	89° 16.2'	1.45	1.57	0.80
Bay Gardene	29° 35.9'	89° 37.1'	1.34	1.44	0.75
Breton Islands	29° 29.6'	89° 10.4'	1.37	1.37	0.69

Jack Bay	29° 22.0' 89° 20.7'	--	1.2	0.6

Wine Island, Terrebonne Bay	29° 04.7' 90° 37.1'	--	1.3	0.6
Cocodrie, Terrebonne Bay	29° 14.7' 90° 39.7'	1.01	1.05	0.53
Caillou Boca	29° 03.8' 90° 48.4'	--	1.4	0.7
Raccoon Point, Caillou Bay	29° 03.5' 90° 57.7'	--	1.7	0.8
Ship Shoal Light	28° 55' 91° 04'	--	1.6	0.8
Atchafalaya Bay				
Eugene Island	29° 22' 91° 23'	--	1.9	1.0
Point Au Fer	29° 20' 91° 21'	--	2.0	1.0
Shell Island	29° 28' 91° 18'	--	1.5	0.7
South Point, Marsh Island	29° 29' 91° 46'	--	1.8	0.9
Lighthouse Point	29° 31' 92° 03'	--	2.0	1.0
Southwest Pass, Vermilion Bay	29° 35' 92° 02'	--	1.6	0.8
Weeks Bay, Vermilion Bay	29° 48' 91° 50'	--	1.5	0.7
Mermentau River entrance	29° 45' 93° 06'	--	2.5	1.2
Calcasieu Pass, Lighthouse wharf	29° 47' 93° 21'	--	2.0	1.0

Few of the stations in the previous list provided data along the coast for the time periods needed, and those that could be used are highlighted in bold red. The stations used were:

Sabine Pass North #8778094;
Calcasieu Pass, East Jetty #8768094;
Grand Isle, East Point #8761724;
Pilots Station East, Southwest Pass #8760922;
Gulfport Harbor #8745557; and

Figures 3-7 are graphs of the predicted (blue line) and observed (red line) tide levels during photo acquisition (NOAA at <http://tidesandcurrents.noaa.gov/>.) The graphs for both time periods are paired by region. The data obtained showed that the water-levels during the September 2005 flight post-hurricane Katrina/Rita remained roughly a half a foot higher

than normal. The November 2006 flight of western Louisiana and the Acadiana Bays were roughly a foot below normal, while the April 2007 water levels for southeastern, eastern and the Lakes Region were very close to normal or slightly (a few inches) above that predicted.

Figure 3A. Graph of the tide levels at Sabine Pass North for September 20-30, 2005, bracketing the landfall of Hurricane Rita on 9/24 and photo acquisition on 9/28 showing the predicted and observed data for the vicinity of BICM regions Western and Eastern Chenier Plain.

Figure 3B. Graph of the tide levels at Sabine Pass North for November 20-21, 2006 during photo acquisition on 11/20 for western Louisiana. This shows that the water levels were roughly a foot lower than predicted for the vicinity of BICM regions Western and Eastern Chenier Plain.

Figure 4A. Graph of the tide levels at Calcasieu Pass East Jetty for September 20-30, 2005, bracketing the landfall of Hurricane Rita on 9/24 and photo acquisition on 9/28 showing the predicted and observed data for the vicinity of BICM regions Western and Eastern Chenier Plain.

Figure 4B. Graph of the tide levels at Calcasieu Pass East Jetty for November 20-21, 2006 during photo acquisition on 11/20 for western Louisiana. This shows that the water levels were roughly a half a foot lower than predicted for the vicinity of BICM regions Western and Eastern Chenier Plain.

Figure 5A. Graph of the tide levels at Grand Isle, East Point for September 20-30, 2005, bracketing the landfall of Hurricane Rita on 9/24 and photo acquisition on 9/28 showing the predicted and observed data for the vicinity of BICM regions Teche Delta and Lafourche Delta.

Figure 5B. Graph of the tide levels at Grand Isle East Point, LA for April 20-22, 2007 during photo acquisition on 4/20 for south eastern Louisiana. This shows that the observed water levels were normal and close to those predicted for the vicinity of BICM regions Teche Delta and Lafourche Delta.

Figure 6A. Graph of the tide levels at Pilots Station East, Southwest Pass for September 20-30, 2005, bracketing the landfall of Hurricane Rita on 9/24 and photo acquisition on 9/28 showing the predicted and observed data for the vicinity of BICM region Chandeleur Islands.

Figure 6B. Graph of the tide levels at the mouth of Southwest Pass, LA for April 20-22, 2007 during photo acquisition on 4/20-21 for south eastern Louisiana. This shows that the observed water levels were normal and close to those predicted for the vicinity of BICM region Modern Delta.

Figure 7A. Graph of the tide levels at Gulfport, MS for September 20-30, 2005, bracketing the landfall of Hurricane Rita on 9/24 and photo acquisition on 9/30 showing the predicted and observed data for the vicinity of BICM region Chandeleur Islands.

Figure 7B. Graph of the tide levels at Gulfport, MS for April 20-22, 2007 during photo acquisition on 4/21 for eastern Louisiana. This shows that the observed water levels were normal and close to those predicted for the vicinity of BICM region Chandeleur Islands.

Location Diagrams for the Photo-pairs

A total of 203 photo-pairs were constructed along the Louisiana coast. Locations of each photo-pair are indicated on the diagrams by a red triangle. The photo-pairs occurred in 6 BICM regions: Western Chenier Plain (32 pairs), Eastern Chenier Plain (25 pairs), Teche Delta (34 pairs), Lafourche Delta (75 pairs), Modern Delta (19 pairs) and Chandeleur Islands (20 pairs). Other regions are not included for the photo-pair since the 2005 coverage was limited.

All location data acquired and generated are archived by latitude/longitude, so these numbers were converted to UTM Zone 15 North, NAD 83 by an external spreadsheet (Corpscon6). The camera angle was interpreted as 90 degrees counter-clockwise from the trackline associated with the 2006-2007 data since the camera was aimed roughly perpendicular to the shoreline.

The data tables and associated excel file are organized by BICM region (Figure 2) with the images for each region on a separate table or a different worksheet in excel. Additionally, the BICM segment breaks are indicated on the tables by BICM segment number and title. To be consistent with other data, all images are listed generally from the west to east.

The satellite image provided by the Louisiana Oil Spill Research and Development Program was used as a background for the figures. The location of each photo-pair is represented by a red triangle and the file name is in yellow. Each figure also represents the coverage of the corresponding slideshow found on one of the included CDs.

Western Chenier Plain

Figure 7. The locations of the 32 photo-pairs along the Western Chenier Plain from Sabine Pass to Mud Lake Outlet are indicated by red triangles.

Eastern Chenier Plain

Figure 8. The locations of the 25 photo-pairs along the Eastern Chenier Plain from Mud Lake Outlet to Southwest Pass are indicated by red triangles.

Teche Delta

Figure 9. The locations of the 34 photo-pairs along the Teche Delta -Isles Dernieres are indicated by red triangles.

Lafourche Delta

Figure 10. The locations of the 22 photo-pairs along the Lafourche Delta – Timbalier Islands are indicated by red triangles.

Figure 11. The location of the 28 photo-pairs compiled along the Lafourche Delta -Headland from Belle Pass Spit to Elmers Island are indicated by red triangles.

Figure 12. The location of the 25 photo-pairs compiled along the Lafourche Delta –Grand Islands from Grand Isle to East Grand Terre Island are indicated by red triangles.

Modern Delta -Plaquemine Barrier Shoreline

Figure 13. The locations of the 19 photo-pairs compiled for the Modern Delta - Plaquemine Barrier Shoreline from Quatre Bayou Pass to Sandy Point are indicated by red triangles.

Chandeleur Islands

Figure 14. The locations of the 20 photo-pairs prepared along the Chandeleur Islands from Breton Island to Hewes Point are indicated by red triangles.

Metadata for 2005 – 2006/2007 Photo-pairs

The following tables list the location data for the 2005 and 2006 - 2007 matching photography. The location data for the 2005 photography was based on the flight line for 2006 by visually matching the photography to the video.

Western Chenier Plain Sabine Pass to Mud Lake Outlet	APS05R digital post- Rita	2005 CDT	AVS07 digital 2007	2006 UTC	camera angle	(location data based on 2006/07 GPS data)		UTM Northing	UTM Easting
