ADDENDUM (2) TO PLANS AND CONTRACT DOCUMENTS

FOR

Bayou Dupont Sediment Delivery Marsh Creation #3 and Terracing (BA-164)

STATE OF LOUISIANA
COASTAL PROTECTION AND RESTORATION AUTHORITY

(9/26/2016)
ADDENDUM NO. (2)
Bayou Dupont Sediment Delivery and Marsh Creation #3 and Terracing
(BA-164)

This addendum shall be considered part of the Plans, Specifications, and Contract Documents (except as noted otherwise) and is issued to change, amplify, or delete from or otherwise explain these documents where provisions of this addendum differ from those of the original documents. This addendum shall have precedence over the original documents and shall govern.

I. Contractor shall use the following address to mail Bids in-lieu of submitting in person (this is a change from the address specified in Instructions to Bidders 5.3.1).

Coastal Protection and Restoration Authority (CPRA)
150 Terrace Avenue
Baton Rouge, Louisiana 70802
ATTN: Dean Andrus

II. Regarding the limits of the pre-construction magnetometer survey, per TS-2.7, the specifications reference “ingress and egress routes within the construction site”. See below clarification.

The pre-construction magnetometer survey shall include all water bodies within the access corridor and work limits. This shall include all water bottoms within the O&G canal from STA 123+40 to STA 166+94, and also all water bottoms within the earthen terrace work limits as shown on the Plans.

III. Regarding the timber and steel pipe piles at the south end of the O&G Canal encountered during the pre-bid site visit.

The Contractor shall remove the steel pipe piles on the western side of the row of piles as necessary to gain access to the work limits. Upon completion of construction the Contractor shall replace the pilings or approved equivalent structure in a manner that prevents boat traffic from entering the O&G Canal as approved by the Engineer. Any costs incurred by the Contractor for removal of the piles shall be included in mobilization/demobilization costs (Bid Item 1).

IV. What is the wait time between the completion of the terraces and the process surveys?

There is not intended to be a specific length of time between completion of an earthen terrace and subsequent process survey. The engineer and/or engineer’s representative shall determine when an earthen terrace has been dressed to satisfactory dimensions per the Plans, and will provide written notice to the Contractor to proceed with a process survey.
V. Can the Contractor negotiate with the Owner for different mobilization and demobilization pay schedules?

Please reference TS-1.4.

VI. Regarding horizontal tolerances for earthen terrace construction.

The Contractor is responsible for constructing the earthen terraces to the lines, grades, elevations and tolerances specified in the Plans to the greatest extent possible (TS-3.1).

VII. Will the Owner consider a different pay schedule for Earthen Terraces?

The pay schedule remains as stated in the Plans and Specifications. (TS-3.8)

VIII. Is the contractor responsible for matting or other materials necessary to cross the existing hydraulic dredge pipeline at the north end of the O&G canal?

The hydraulic dredge pipeline is planned to be removed from the area near the north end of the O&G canal before the start of earthen terrace construction. However, should the dredge pipeline remain in place, the contractor shall be responsible for crossing it in a manner not to cause any damage and all coordination with the owner of that pipeline.

IX. Pre-Bid Meeting Sign-In Sheet.

The Pre-Bid Meeting Sign-In sheet is attached.
