**MISSISSIPPI RIVER DELTA  
DELTA-WIDE CREVASSES (MR-0009)  
ON PASS-A-LOUTRE WILDLIFE MANAGEMENT AREA (PALWMA)  
AND DELTA NATIONAL WILDLIFE REFUGE (DNWR)  
PLAQUEMINES PARISH, LOUISIANA**

**September 18, 2019**

## **1.0 INTRODUCTION**

The project area is located in Plaquemines Parish, to the southeast of Venice, Louisiana on the active Mississippi River Delta (Figure 1). The project consists of maintaining existing crevasse-splays, the construction of new crevasse-splays, and future maintenance of selected crevasse-splays in both the Pass-A-Loutre Wildlife Management Area (PALWMA) and the Delta National Wildlife Refuge (DNWR). Crevasses are breaks in the levee that allow overbank deposition of sediments to occur in adjacent inter-distributary receiving bays. The PALWMA covers 115,000 acres between Pass-A-Loutre and Southwest Pass and is owned and managed by the Louisiana Department of Wildlife and Fisheries (LDWF). The DNWR covers 48,000 acres from just north of Main Pass southward to Pass- A-Loutre and is owned and managed by the U.S. Fish and Wildlife Service (USFWS).

## **2.0 PROJECT OVERVIEW**

Eight (8) crevasses – six (6) are new, one (1) is a clean-out, and one (1) is reopening of an old crevasse – will be dredged along Octave Pass, Raphael Pass, Flatboat Pass, South Pass, and Loomis Pass. New crevasses will be dredged in South Pass, Loomis Pass, Octave Pass, Flatboat Pass, and Raphael Pass. The crevasse “cleanout” will occur along South Pass and the reopening of an old crevasse will occur along Raphael Pass. Surveying services are needed for the following:

### **Topographic Survey**

- Two continuous, parallel transects on the total length of sub-aerial, natural ground along 6 new crevasse alignments in South Pass, Loomis Pass, Octave Pass, Flatboat Pass and Raphael Pass as well as along the old crevasse to be reopened in Raphael Pass.

### **Bathymetric Survey**

- Two continuous, parallel transects along each new crevasse alignment, excluding the sub-aerial natural ground
- Centerline profile of crevasse listed as “Cleanout”
- Ten cross-sections at the proposed cleanout

### **Magnetometer survey**

- Survey proposed alignment for the new and reopened crevasses, and for the cleanout crevasse.

## **3.0 DATA COLLECTION SUMMARY**

### **3.1 GPS Control Survey**

During the period of May 7<sup>th</sup>, 2019 through May 13<sup>th</sup>, 2019 MPH performed a static survey of MR09-SM-31, MR09-SM-38 and MR09-SM06 to verify the horizontal and vertical control on the monuments. For the purpose of this project, the elevation of the monuments are referenced to Geoid12B.

### **3.2 Topographic, Bathymetric and Magnetometer Survey**

During the period of April 23<sup>rd</sup>, 2019 through August 30<sup>th</sup>, 2019, MPH collected field data throughout the MR-0009 project. All field work on the Topographic, Bathymetric, and Magnetometer Survey was completed on Auguts 30<sup>th</sup>, 2019. The office work began in advance of the fieldwork. A total of eight (8) crevasses were surveyed at the locations provided. The transects were spaced at intervals with varying lengths as provided by CPRA. Survey transects were laid out in the open water and broken marsh. Position, elevation, and water depth were recorded at a minimum of every 25-ft or where elevations changes of greater than 0.5-ft occurred along each transect, where possible. An appropriate topo shoe was attached to the bottom of the survey rod to prevent the rod from sinking. The Conventional Survey Crews utilized an airboat and a Trimble RTK/GPS base and rover setup for positioning and real-time corrections.

A bathymetry survey was performed along the proposed crevasse alignments where water depths were greater than 2-ft. The bathymetry survey overlapped the topographic survey a minimum of 50-ft. The bathymetric survey points were collected utilizing Trimble SPS 461 DGPS rover and Odom HydroTrac Echo sounder in conjunction with the Hypack software. A sampling rate of 5 Hz (5 points/second) was used during data collection. The Hydrographic Survey Crew used a 16' boat with outboard marine engine.

MPH performed a magnetometer hazard survey along the same transects established during the topographic and bathymetric survey. The magnetometer lines were run during the same time frame as the bathymetry survey lines where possible. In the upland areas within the project, the magnetometer survey was performed utilizing an airboat. The magnetometer survey was completed utilizing a Trimble RTK/GPS and Geometrics G-882 Cesium Magnetometer. All data was collected and processed with Hypack software.

---

## 4.0 METHODOLOGY

### 4.1 Static GPS Network Planning

The Static GPS Network was designed to incorporate two (2) CORS “Continuously Operating Reference Stations” from the Center for GeoInformatics at LSU. The two CORS used for this survey were “GRIS” and “BVHS”. They are located in Grand Isle and Boothville, respectively. Since these stations are continuously collecting data, simultaneous data was collected for the two CORS during the time of the static survey of each of the three monuments “MR09-SM-31”, “MR09-SM-38” and “MR09-SM06”. A Static GPS Survey was run on one monument each day during the RTK Survey on a rotational basis throughout the job. On that day a three (3) minute observed control point was measured utilizing a bipod/tripod on the other monument at the beginning and ending of each day. [This process was repeated each day rotating the GPS Base for the ten (10) day project duration with the same static and RTK survey procedure described above used to measure the other monument at the beginning and ending each day.] This yielded sufficient data to correlate the 3 monuments to one another. Due to the project length being 10 days, we were able capture different site and atmospheric conditions in order to generate independent and redundant observations. The static surveys were performed concurrently with the field topographic cross sections. All data collected is referenced to the Lambert Conformal Conic Projection, Louisiana State Plane Coordinate System (South Zone), the North American Datum of 1983 (NAD83) and the North American Vertical Datum of 1988 (NAVD88), Geoid12B.

### 4.2 GPS Static Survey

The GPS Static Survey was performed using Trimble R10/R10 GPS receivers equipped with fixed height tripods. The GPS receivers were set to collect L1 and L2 data at a 15 second epoch rate with a 10-degree elevation mask. Static GPS data was collected at the benchmark for a minimum of 3 hours per session. Data collection sessions were performed on different days during the RTK Topographic Surveys as shown on the GPS Session Schedule in Appendix 2.

### 4.3 Data Processing and Network Adjustment

The static GPS data was downloaded from the receiver and imported into Trimble Business Center (TBC) for processing and QA/QC. Each setup was checked to verify that the antenna height and station name matched the corresponding field log sheet.

Each baseline was processed using a 15-degree elevation mask and all baselines achieved a fixed solution with no editing. This adjustment used Geoid12B as the basis for determining orthometric heights of adjusted ellipsoid heights. The network was found to fit existing control within acceptable limits, and all primary control was found to be consistent with respect to differences in published and computed elevation values. The Fully Constrained Network Adjustment report and final adjusted positions can be seen in Appendix 1.

---

## 5.0 SURVEY CONTROL

Benchmarks used as a control are tied into the CPRA – Louisiana Coastal Zone (LCZ) GPS Network. MPH conducted all surveying activities using the “MR09-SM-31” (Secondary LCZ control monument) and “MR09-SM-38” (Secondary LCZ control monument), and “MR09-SM-06” (Secondary LCZ control monument) which were updated by performing a GPS Network Adjustment into the LCZ GPS network using the Geoid12B model. These benchmarks are identified by the Louisiana State Plane Coordinate System (South Zone), the North American Horizontal Datum of 1983 (NAD 83), and the North American Vertical Datum of 1988 (NAVD88) geoid 12B. The information for the three monuments was gathered from CPRA’s CIMS website and existing LCZ GPS Network.

## 6.0 QA/QC Procedures

MPH conducted topographic, bathymetric, and magnetometer surveys for the Delta-Wide Crevasses (MR-0009) project as per the practices set forth in CPRA’s January 2016 version of “A Contractors Guide to the Standards of Practice”. MPH furnished the necessary equipment, software, supplies, labor and transportation, including fuel, needed to complete the work as outlined in the Reconnaissance Field Data Collection plan provided to CPRA prior to the commencement of the surveying activities within the fill area. All fieldwork associated with these surveys were conducted under the direct supervision of a Professional Land Surveyor.

All field and office work performed was completed utilizing the in-house developed Operating Procedures and Quality Control/Quality Assurance Manual. This manual was developed to define appropriate standards of practice and accepted operating procedures and performance criteria to be used to provide consistency, accuracy, and reliability of services and products. These practices included: checking into secondary monumentation at the beginning and ending of each day to ensure GPS quality assurance, performing bar checks and sound velocity checks at the beginning and ending of each day for the bathymetry surveys, performing a calibration line with the magnetometer to ensure proper functionality and offset values, etc. All equipment used on the project checked for proper calibration prior to the start of the project. Field survey data was also analyzed in the office on a daily basis to ensure accuracy and quality.

---

## 7.0 HORIZONTAL AND VERTICAL CONTROL

MPH performed a GPS survey utilizing RTK OTF methods. The GPS Total Station survey equipment included the use of a Trimble R10 Dual Frequency receiver as a rover and a Trimble R10 Dual Frequency receiver as a base. The base station occupied one of the three survey control monuments “MR09-SM-31” (Secondary LCZ control monument) and “MR09-SM-38” (Secondary LCZ control monument), and “MR09-

SM-06" (Secondary LCZ control monument) and rover units were used to collect horizontal and vertical data along the transects. [For quality control, the GPS Base Receiver was set up on an existing project control point with an established horizontal position and elevation while the Rover Receiver was used to observe the other existing project control point checking. This observed position was checked against the newly established position of the control points to verify that it was within an accepted tolerance. This QA/QC process was performed daily throughout the duration of the project.] Survey data was downloaded and processed utilizing Trimble Business Center. The complete RTK Total Station survey method yields nominal accuracies of 1 cm horizontal and 2 cm vertical. The monuments which were used for control, are referenced to the Lambert Conformal Conic Projection, Louisiana State Plane Coordinate System (South Zone), the North American Datum of 1983 (NAD83) and the North American Vertical Datum of 1988 (NAVD88).

## **8.0 ALIGNMENT SURVEY**

MPH performed topographic and bathymetric surveys along proposed crevasse alignments. The survey transects for the alignment and bathymetric survey that were performed and developed based on the information provided by CPRA. A total of (15) transects, were surveyed (Two at each proposed crevasse location and one at SP-12 with additional cross-sections) during this phase of the project. The transects were spaced at varying intervals and lengths as provided by CPRA. Survey transects were laid out in the open water, broken marsh, and across natural bayous. Position, elevation, and water depth were recorded at a minimum of every 25 ft. along each transect, where possible. The topographic survey was completed utilizing a Trimble RTK/GPS base and rover setup. A 6-inch diameter topo shoe was attached to the bottom of the survey rod to prevent the GPS antenna rod from sinking. In areas, where water depths were too deep for the use of the GPS antenna rod a level rod was used to take soundings.

## **9.0 MAGNETOMETER HAZARD SURVEY**

MPH performed a magnetometer hazard survey along the same transects established during the alignment and bathymetric survey. The magnetometer survey was performed utilizing a Trimble SPS 461 DGPS and Geometrics G-882 Cesium Magnetometer. All data was collected and processed in Hypack software. At the start and end of each day a calibration line was performed in opposite directions to ensure proper functionality and offset values.

### **9.1 Hazard Investigation Survey**

Once field data collection was completed, magnetic anomalies were determined from processing magnetometer data and interpretation. The magnetometer gamma baseline during the field geohazard survey was 46400 gammas. The Geometrics model G-882 last certified manufacturer (dated 3/13/18) depth calibration =

0.016483 (salt water) and bias = -1.65. The altimeter calibration scale = 0.01016 and bias = -1.27.

The magnetometer dataset was processed using the Single Beam Editor in HYPACK®. Magnetic anomalies were evaluated on the basis of one hundred (100) gammas or higher. There were Seven (7) magnetometer anomalies selected within the areas of the 8 crevasses surveyed. Six were on the Pass-A-Loutre Wildlife Management Area and one on Delta National Wildlife Refuge. A conventional survey crew investigated the six on the Pass-A-Loutre Wildlife Management Area being they were in areas of concern. Of the six located on Pass-A-Loutre Wildlife Management Area three were located on South Pass (SP-11), one was located on South Pass (SP-12), and two were located on Loomis Pass (LP-13) crevasse locations. The one anomaly in the Delta National Wildlife Refuge was not of concern because of the location being on the opposite bank northwest of the proposed Flat Boat Pass (FP-10) crevasse location.

For each magnetic anomaly the conventional survey crew ran a closed loop path with a gradiometer. The path completely enclosed the original finding location, while maintaining a distance of approximately 25 feet from the anomaly location. A 25 foot circular path was used around each of the anomaly locations with no other readings encountered.

## **10.0 Chronological Summary of Work**

| Project #      | Group                                    | Date                     |
|----------------|--|--------------------------|
| <b>MR-0009</b> | <b>ALIGNMENT SURVEY</b>                  | <b>4/23-5/14/2019</b>    |
| <b>MR-0009</b> | <b>CROSS SECTION SURVEY</b>              | <b>5/14/2019</b>         |
| <b>MR-0009</b> | <b>BATHYMETRY SURVEY</b>                 | <b>8/26/2019</b>         |

## **11.0 Deliverables**

As requested in the CPRA of Louisiana Scope of Services the following deliverables are being submitted:

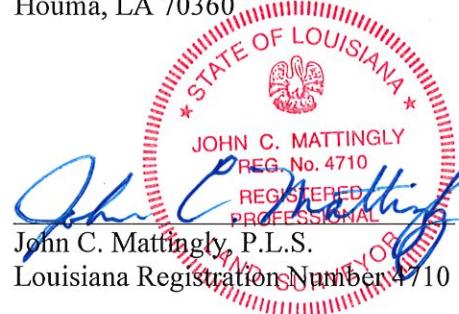

- 11.1** A report describing the survey methodology employed in the field.
- 11.2** Two sets of 11" x 17" size plan view drawings showing an overlay of the Lambert Conformal Conic Projection Louisiana State Plane Coordinate System South Zone NAD 83 and drawings showing all survey control points utilized in the survey. Two sets of 11" x 17" size plan and profile drawings, depicting the results of the topographic and bathymetric surveys.
- 11.3** Two digital copies of drawing files on separate CD disks or jump drives in AutoCAD (\*.dwg) format.

- 
- 11.4** A copy of the XYZ survey data will be provided in a comma-delimited ASCII format. The data is referenced to the Louisiana Coordinate System (South Zone) and North American Datum of 1983 (NAD 83) in U.S. Survey Feet. Elevations are referenced to the North American Vertical Datum of 1988 (NAVD 88) in feet.
  - 11.5** Two printed copies of the survey data.
  - 11.6** Two printed copies of the field notebook records.

## **12.0 CERTIFICATION**

I hereby certify that the report, data and drawings referenced herein were prepared from a field survey conducted on the ground by me or under my direct supervision and control and that the report, data and drawings accurately depict the result of said survey.

Morris P. Hebert, Inc.  
283 Corporate Drive

AN ON-THE-GROUND EFFORT WAS MADE TO LOCATE AND INDICATE ALL BELOW GROUND FERROUS METAL CABLES, PIPELINES AND UTILITIES IN THE AREAS DESCRIBED ABOVE; HOWEVER, DUE TO THE INHERENT LIMITATIONS OF ELECTRONIC MAGNETIC LOCATING EQUIPMENT, MORRIS P. HEBERT, INC. IS NOT RESPONSIBLE FOR ANY CABLES, PIPELINES, UTILITIES OR ANY OTHER BELOW GROUND STRUCTURES (INCLUDING PVC) NOT LOCATED DURING THE COURSE OF THE SURVEY. MPH'S EFFORTS DO NOT RELIEVE THE LA ONE CALL RESPONSIBILITY PRIOR TO MOBILIZATION OF EQUIPMENT AND OR EXCAVATION.

CREVASSSE OP-7 ALT. (N) TRANSECTS 1 & 2 LOCATED ON SHEET 12

MAGNETOMETER NOTE: There were no magnetic anomalies at this crevassse location that were above 100 gammas found by the MPH survey dated August 27, 2019.

AN ON-THE-GROUND EFFORT WILL BE MADE TO LOCATE AND INDICATE ALL BELOW GROUND FERROUS METAL CABLES, PIPELINES AND UTILITIES IN THE AREAS DESCRIBED ABOVE; HOWEVER, DUE TO THE INHERENT LIMITATIONS OF ELECTRONIC MAGNETIC LOCATING EQUIPMENT, MORRIS P. HEBERT, INC. IS NOT RESPONSIBLE FOR ANY CABLES, PIPELINES, UTILITIES OR ANY OTHER BELOW GROUND STRUCTURES (INCLUDING PVC) NOT LOCATED DURING THE COURSE OF THE SURVEY. MPH'S EFFORTS DO NOT RELIEVE THE LA ONE CALL RESPONSIBILITY PRIOR TO MOBILIZATION OF EQUIPMENT AND OR EXCAVATION.

| 100101       | 3958707.65 | 215416.8  | 29 04 30.2518 N | 089 12 40.7587 W | 002_0936  | m+        | 46426      | 100       | 2.8                 | 26.5                       | 27-Aug-19    | Low              |
| 100102       | 3957459.67 | 215646.42 | 29 04 32.7531 N | 089 12 54.7717 W | 001A1001  | m+        | 46396      | 254.1     | 17.9                | 147.6                      | 27-Aug-19    | Medium           |

MAGNETOMETER NOTE: MPH identified all inflections (anomalies) above 100 gammas. Lower inflections (<250 gammas) signify small to moderate ferrous objects, medium inflections (250 to 500 gammas) signify moderate to large ferrous objects and high inflections (>500 gammas) indicate large ferrous objects.

CREVASSE SP-11 (N) TRANSECTS 1 & 2 LOCATED ON SHEET 14

AN ON-THE-GROUND EFFORT WAS MADE TO LOCATE AND INDICATE ALL BELOW GROUND FERROUS METAL CABLES, PIPELINES AND UTILITIES IN THE AREAS DESCRIBED ABOVE; HOWEVER, DUE TO THE INHERENT LIMITATIONS OF ELECTRONIC MAGNETIC LOCATING EQUIPMENT, MORRIS P. HEBERT, INC. IS NOT RESPONSIBLE FOR ANY CABLES, PIPELINES, UTILITIES OR ANY OTHER BELOW GROUND STRUCTURES (INCLUDING PVC) NOT LOCATED DURING THE COURSE OF THE SURVEY. MPH'S EFFORTS DO NOT RELIEVE THE LA ONE CALL RESPONSIBILITY PRIOR TO MOBILIZATION OF EQUIPMENT AND OR EXCAVATION.

**VICINITY MAP** Scale: 1"=2000' Reproduced from USC&GS "PILOTTOWN & PASS A LOUTRE WEST, LA" Quads

**Station Name:** "MR09-SM-31"

**Monument Location:** By boat from Venice, Louisiana, proceed southeasterly in the Mississippi River for approximately 7.4 miles to Cubits Gap at the left. Turn left and proceed easterly though the north of Cubits Gap into Main Pass and continue for 1.5 miles to the monument on the right.

**Monument Description:** Deep Rod Monument; standard 3" survey disk set on steel rods and driven 52.2 feet to refusal, set in a PVC pipe and is recessed 0.4 feet below top of PVC pipe.

Date: August, 2002

**Monument Established By:** Pybum & Odom, Inc.

For: LA Department of Natural Resources, CRD

**P&O Published NAD 83 Geodetic Position**

Lat.  $29^{\circ} 13.130^{\prime \prime}$ N  
Long.  $89^{\circ} 14.951^{\prime \prime}$ W

**P&O Published NAVD88 (Feet)**

Elevation = 7.51

**Adjusted NAD 83 Geodetic Position**

Lat.  $29^{\circ} 13' 07.59626^{\prime \prime}$ N  
Long.  $89^{\circ} 14' 57.26098^{\prime \prime}$ W

**Adjusted NAD 83 Datum LSZ (1702) Feet**

N= 267,445.51  
E= 3,945,645.93

**Adjusted NAVD88 Height**

Elevation = 7.60 ft

Position determined by using Real-time Kinematic (RTK) survey from Temporary Flypoint "BILL"

**VICINITY MAP** Scale: 1"=2000' Reproduced from USC&GS "PILOTTOWN & PASS A LOUTRE WEST, LA" Quads

### Station Name: "MR09-SM-38"

**Monument Location:** By boat from Venice, Louisiana, proceed southeasterly in the Mississippi River for approximately 7.4 miles to Cubits Gap at the left. Turn left and proceed easterly though the north of Cubits Gap into Main Pass and continue for 3.3 miles to the monument on the left.

**Monument Description:** Deep Rod Monument; standard 3" survey disk set on steel rods and driven 54.3 feet to refusal, set in a PVC pipe and is recessed 0.4 feet below top of PVC pipe.
