Mr. Billy Nungesser, Parish President  
Plaquemines Parish Government  
Buras Levee District  
8056 Highway 23  
Suite 200  
Belle Chasse, Louisiana 70037

Dear Mr. Nungesser:

Please reference our letter of no objection to you dated July 1, 2012, regarding a permit request from Office of Coastal Protection and Restoration, concerning permission to dredge in the Mississippi River and install a pipeline across the right descending Mississippi River levee, vicinity of second order levee station 802+00, and install a pipeline across the New Orleans to Venice hurricane protection, Reach B-1, vicinity of levee station 955+00, in Plaquemines Parish, Louisiana.

Subsequently, we have received a letter request dated September 13, 2012 from Coastal Protection and Restoration Authority requesting approval for revisions to their original plans which includes an additional Temporary Mooring Area on the flood side of the right descending Mississippi River levee, between second order levee stations 903+00 and 909+00. We have reviewed this revision and have no objection to your Office's issuance of a permit for the proposal provided:

- a. The work is accomplished in accordance with the above referenced letter dated September 13, 2012, and accompanying drawings (copy enclosed).
- b. The pilings are installed when the stage of the Mississippi River is below elevation +15.0 feet on the Carrollton gage, at New Orleans, Louisiana.

c. Any damage to the existing revetment must be repaired in accordance with the Corps of Engineers Standard drawing, "Repair Procedures Required When Penetrating Revetments with Pile, Cassions, And/Or Pile Clusters", file No. H-18-45204, copy enclosed.

d. That all provisions of our original letter of no objection dated July 1, 2012, referenced above, not affected by this revision, remain in effect.

This letter of no objection is based upon engineering criteria, and no interpretation or comments regarding local laws, zoning, or ordinances concerning property rights, etc., have been made. Additionally, this letter of no objection does not obviate the applicant's requirement to obtain federal, state, or local permits required by law.

If we can be of any further assistance, please feel free to call Mr. Jim Walters of my office, at (504) 862-2354. Additionally, future correspondence concerning this project should reference our permit number 12-610. This will allow us to more easily locate records of previous correspondence, and thus provide a quicker response.

Please furnish this office a copy of your permit if the applicant's proposal is approved by your Office.

Sincerely,

Amy E. Powell  
Operations Manager, Completed Works
